

Review of Market Performance Fiscal Year 2015

CAMBRIDGE

ASSOCIATES

- ◆ In the fiscal year ended June 30, 2015, markets were driven to a large extent by a strengthening in the US dollar and a decline in oil prices, both of which impacted returns for a variety of risk assets. The year also witnessed a number of reversals, with European equities excluding the UK and emerging markets equities delivering strong performances in the second half of the year relative to the first for US\$ investors.
- ◆ The S&P 500 Index returned 7.4% in the fiscal year due partly to returns in the consumer discretionary, health care, and information technology sectors, which more than offset large energy sector losses. Developed markets equities returned 8.4% in local currency terms, but for unhedged US\$ investors, the dollar rally cut gains to 1.4%. Equities in Hong Kong and Ireland were the only developed markets to return double digits in US\$ terms this fiscal year.
- ◆ Emerging markets equities ended the fiscal year down 4.8% for US\$ investors, one of the worst fiscal year returns in 27 years of data. Equities in Latin America and Europe, the Middle East & Africa had particularly weak returns, with nine countries losing more than 10%. China, which sold off more than 5% in June, as concerns about a market bubble grew, still returned 25.0% this fiscal year to help emerging markets in Asia deliver aggregate positive performance.
- ◆ Bond markets delivered mixed results in the fiscal year. The benchmark Barclays US Aggregate returned 1.9%, but beyond the United States, fixed income positions struggled for US\$ investors, with the Barclays European Aggregate losing 15.8%. US high-yield bonds lost 0.4%, but high-yield new issuance remained near its fiscal year 2013 peak, despite stress in the energy sector. Ten-year Treasuries returned 3.8%, helped by a downward shift in the long end of the yield curve.

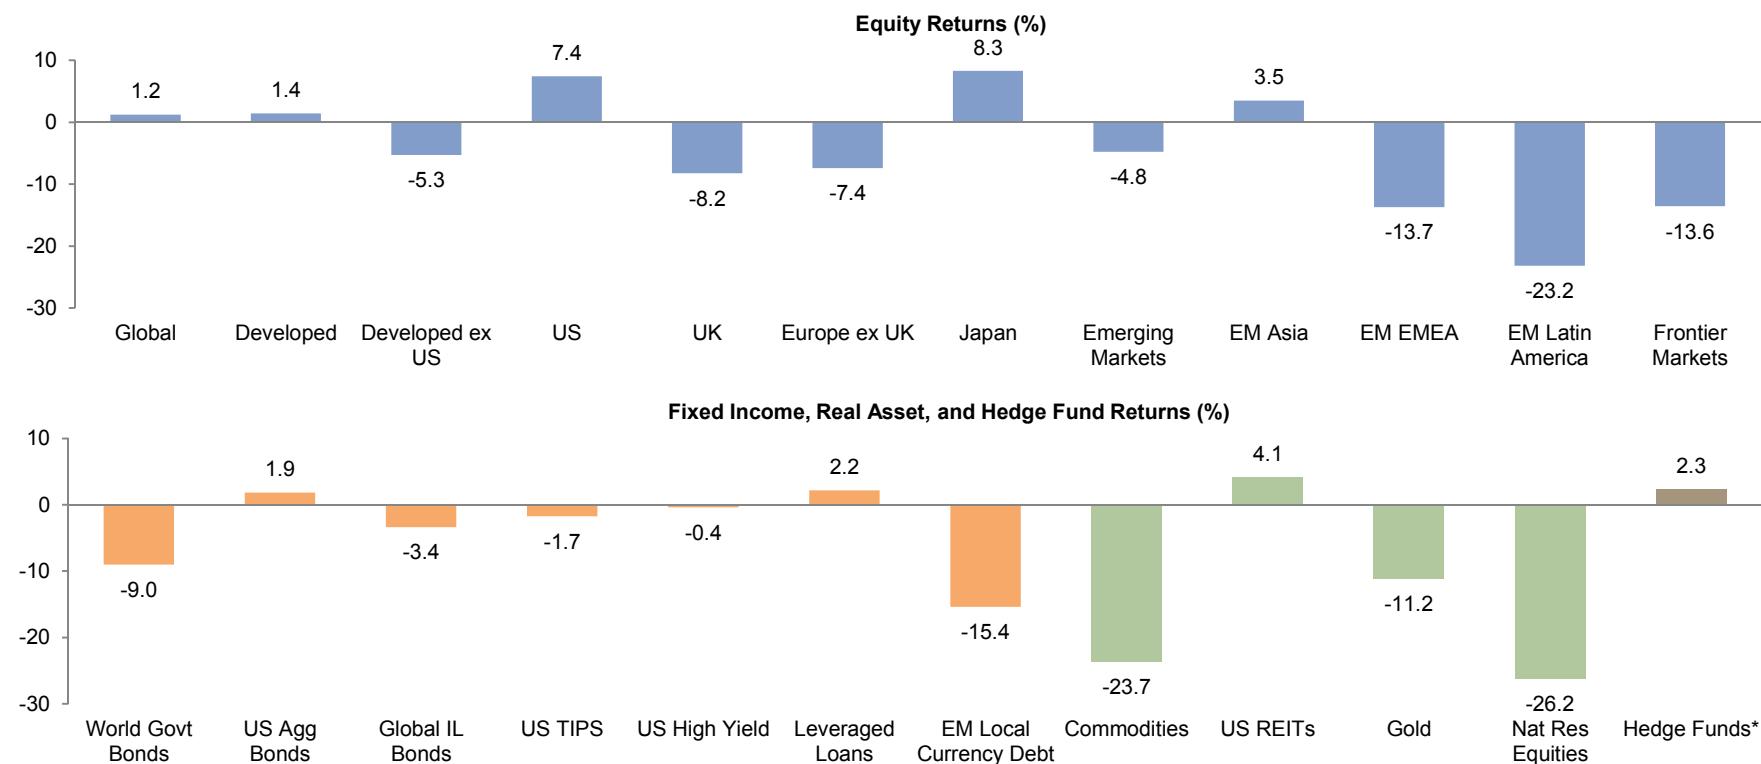

- ◆ Real assets performed poorly in the year ended June 30, with the MSCI World Natural Resources Index returning -26.2% and the Bloomberg Commodity Index, -23.7%. While energy sector weakness and US\$ strength moderated in the last quarter of the fiscal year, the two factors partly explain the weak performance. US REITs returned 4.1%, but in the last six months the asset class has lost 5.4%. Gold prices ended the year at \$1,169/troy ounce, down 11.2%.
- ◆ Preliminary index returns for hedge funds show low single-digit returns for most strategies. The widely followed HFRI Fund Weighted Composite Index returned 2.3%, down from 9.1% last fiscal year, and the HFRI Equity Hedge Index returned 2.6%, down from 12.5%.
- ◆ Preliminary one-year returns to March 31, 2015, for the Cambridge Associates LLC US Private Equity Index® and the Cambridge Associates LLC US Venture Capital Index® were a robust 10.6% and 20.1%, respectively. The corresponding five-year returns were 15.4% and 16.8%, respectively.
- ◆ Initial public offerings backed by US private equity and venture capital firms raised \$31.8 billion, an amount that is about half last fiscal year's. The total deal value for US private equity-linked mergers & acquisitions was \$93.1 billion, but firms continue to show restraint in deploying capital, with the total uninvested capital among the 2009 to 2014 calendar year vintages rising to over \$450 billion.
- ◆ The US dollar strengthened against all major developed currencies this fiscal year, rising particularly against the euro, the Australian dollar, and the Japanese yen. Of the 21 emerging currencies we track, 13 posted double-digit losses versus the dollar, and only the Chinese yuan managed to eke out a gain.

Commodities and Related Assets Suffered in Fiscal Year 2015

Among equities, US and Asian markets led

Asset Class Performance: Fiscal Year 2015

July 1, 2014 – June 30, 2015 • US Dollar
