## Notes on the Data

### Equity Returns Data

- **US:** From 1900 to 1968, US equity series returns come from the Global Financial Data S&P 500 Index. This uses data from the Cowles/Standard & Poor's Index of stocks through 1918 and then the Standard Composite after 1918. This index was calculated by the Standard Statistics Company and initially consisted of a 90-stock average, which included 50 industrials, 20 rails, and 20 utilities. The 90-share index was used through 1957, when S&P introduced the S&P 500 stock average, including 425 industrials, 25 rails, and 50 utilities. From 1969 to the present, the data cited come directly from the S&P 500 Index.<sup>1</sup>
- **UK:** Data from 1900 to June 1962 are based on the historical total return index of UK shares compiled by Global Financial Data, Inc. Returns from September 1962 to December 1964 are calculated for the FT-500 Non-Financials Index provided by data from the FT Actuaries Library. Total returns from January 1965 to December 1992 are based on the FTSE® Total Non-Financial Index calculated by Thomson Reuters Datastream, while from 1993 to the present, returns are based on the FTSE® All-Share Index, as calculated by FTSE®.
- **Japan:** From 1921 to 1968, Japan equity series returns come from Global Financial Data, Inc. The National Bank Index is used from January 1921 through December 1932, and the Oriental Economist Index is used from 1933 through September 1948. The Fisher Index is used from September 1948 through April 1949. The Tokyo stock exchange officially reopened in May 1949, and the Nikkei 225 Index is used from May 1949 until 1969. From 1969 on, the MSCI Japan Index is used and the data cited come from MSCI Inc. Total return data for the MSCI Japan Index are net of dividend taxes.
- **Australia:** From 1912 to 1968, Australia equity series returns come from Global Financial Data, Inc. The All Ordinaries Index is used over this time frame as it is Australia's premier market indicator. The index represents the 500 largest companies listed on the Australian Stock Exchange. From 1969 on, the MSCI Australia Index is used and the data cited come from MSCI Inc. Total return data for the MSCI Australia Index are net of dividend taxes.

<sup>1</sup> As of January 1, 1988, S&P 500 total return calculations are based on daily reinvestment of accrued dividends on ex-date.

---

## Notes on the Data

---

### Equity Returns Data (continued)

- **Emerging Markets:** Data are sourced from the MSCI Emerging Markets Index from 1987, the index inception date. Returns used in exhibits are based on a spliced series of gross and net of dividend tax returns due to availability of the net return series. From 1987 through 2000, gross returns are used. From 2001 onwards, net returns are used. For graphs showing emerging markets compared to developed markets, the gross/net splicing methodology is also used for developed markets, and data are shown in USD terms for comparative purposes. For initial valuation and subsequent return charts, emerging markets returns are shown in local currency terms.

---

### Bond Data

The long-term bond series for each region is calculated and provided by Global Financial Data, Inc.

- **US:** From 1900 to September 1917, the 4% US Government Bonds of 1925 are used. Where no trades were recorded during a given month, the previous month's yield was used. The sources for this data is William B. Dana Co., *The Financial Review*, New York: William B. Dana Co. (1872–1921), which reprinted data published by *The Commercial and Financial Chronicle*. The 4% Liberty Bonds are used from October 1917 through December 1918, and beginning in 1919, the Federal Reserve Board's 10–15 Year Treasury Bond Index is used. Ten-year bonds are used beginning in 1941.
  
- **UK:** The British consol is used from 1900 until 1934. The United Kingdom 3% Funding Loan of 1934 (Redeemable 1959–1969) is used from July 1934 until July 1947 and the United Kingdom 2.50% Treasury Bonds of 1947 (Redeemable after 1975) is used from August 1947 until December 1978. The Bank of England's index of ten-year bonds is used from January 1979 on. The benchmark bond is used for this series. The benchmark bond is the bond that is closest to the stated maturity without exceeding it. When the government issues a new bond of the stated maturity, it replaces the bond used for the index to keep the maturity as close to the stated time period as possible. Depending on how much of a difference there is in maturities, there may be some adjustment in the yield when the new bond is introduced.

---

## Notes on the Data

---

### Bond Data (continued)

- **Japan:** The Empire of Japan 4% Sterling Bonds of 1899 is used from 1900 to 1930. Tokyo quotes begin in 1931. Tokyo quotes for the 5% Japanese Bond are used from 1931 through 1946. No data are available from January 1947 until November 1948. The data from 1948 until September 1961 represent the yields on bonds newly issued during that month. When no bonds were issued, the previous month's yield was used. The series beginning from October 1961 to December 1971 is for seven-year government bonds. Data from January 1972 to present uses the yield on the ten-year government bond. The benchmark bond is used for this series. The benchmark bond is the bond that is closest to the stated maturity without exceeding it. When the government issues a new bond of the stated maturity, it replaces the bond used for the index to keep the maturity as close to the stated time period as possible. Depending on how much of a difference there is in maturities, there may be some adjustment in the yield when the new bond is introduced.
  
- **Australia:** The New South Wales 3% Inscribed Bond due 1935 is used from January 1900 to November 1917, the Australia 5.50% External Debt of 1917 (Redeemable 1922–1927) is used from December 1917 to June 1922, the Australia 5% Registered Bond of 1922 (Redeemable 1935–1945) is used from July 1922 to August 1933. From 1933 until 1936, 4% bonds are used. Starting in 1937, a weighted average of bonds of 10 years through 1940, 12 years from 1941 to May 1959, 20 years from June 1959 through 1980, 15 years from 1981 through 1990, and 10 years since 1991 is used to produce the theoretical yield on a perpetual ten-year bond.

---

## Notes on the Data

---

### Cash Data

- **US:** The money market instrument return series is composed of the Global Financial Data USA AA-Rated 3-Month Non-Financial Commercial Paper Index from 1900 through 1918. From 1919 to March 1970, the Global Financial Data USA T-Bill Index is used. From April 1970 to December 1977, T-bill data were sourced directly from the Federal Reserve. From January 1978 to the present, the BofA Merrill Lynch 91-Day Treasury Bill Index total return is used.
- **UK:** The Global Financial Data United Kingdom Total Return Bills Index is used from 1900 through January 1985. To calculate total returns, the index uses the yield on Treasury bills. The United Kingdom 3-Month Treasury Bill Index is used from February 1985 to the present, as sourced from the UK Debt Management Office via Thomson Reuters Datastream.
- **Japan:** The Global Financial Data Japan Total Return Bills Index is used. To calculate total returns, the Bank of Japan Discount Rate is used from 1900 to 1913, the Overnight Call Money rate from 1914 to January 1945, the Bank of Japan Discount Rate from February 1945 to 1948, the overnight call money rate from 1949 to 1959 and Treasury bill yields from 1960 on.
- **Australia:** The Global Financial Data Australia Total Return Bills Index is used. To calculate total returns, the index uses the bank deposit rate from 1900 until June 1928 and Treasury bill yields thereafter.

## Notes on the Data

### Inflation Data

- **US:** From January 1900 to January 1913, the Global Financial Data US BLS Consumer Price Index is used. From February 1913 to present the US Department of Labor - Bureau of Labor Statistics Consumer Price Index, All Urban Consumers (CPI-U) is used. Data for both series are non-seasonally adjusted.
- **UK:** From January 1900 to February 1956, the Global Financial Data United Kingdom Consumer Price Index is used. From March 1956 to November 2003, the UK Retail Price Index is used. From December 2003 to present, the UK Consumer Price Index is used. Retail and Consumer Price Index data are sourced from the Office for National Statistics and are based on the non-seasonally adjusted series.
- **Japan:** From January 1922 to January 1957, the Global Financial Data Japan Consumer Price Index series is used. From February 1957 to present, the Japan Consumer Price Index is used, as sourced from the Japan Statistics Bureau, Ministry of Internal Affairs & Communication. Data are non-seasonally adjusted.
- **Australia:** From January 1912 to March 1950, the Global Financial Data Australia Consumer Price Index is used. From June 1950 to present, the Australia Consumer Price Index, as sourced from the Australian Bureau of Statistics, is used. Data are non-seasonally adjusted. Australia CPI data are only reported on a quarterly basis. For intra-quarter months we calculate CPI levels using a linear interpolation based on the reported quarter-end data points.
- **Emerging Markets:** Where USD returns are used, as with the US data, we use the US Department of Labor – Bureau of Labor Statistics CPI-U inflation measure. Where local currency returns are used, we use a proprietary basket inflation measure based on the prevailing country exposures and weights of the MSCI Emerging Markets Index at each given period. The inflation basket is calculated as the weighted average of each country's official non-seasonally adjusted consumer price index, with weights derived from the country's allocation in the index. The constituency of the inflation series is dynamic over time as countries are reclassified into and out of the emerging markets index.

# Index Disclosures

## General Disclaimer

Notwithstanding any specific disclosure provided below, indexes listed on the previous page and used in this report are the property of the named provider of such index.
