### 2ND QUARTER • 2020

# UK FOUNDATIONS AND ENDOWMENTS

COMPARATIVE ASSET ALLOCATION AND TOTAL RETURN

#### **NOTES ON THE DATA**

**DATA COLLECTION.** Included in this analysis for the quarter ended 30 June 2020 are 31 UK-based foundations and endowments. The average market value of participating UK foundations and endowments was £277.5 million, and the median market value was £128.6 million for the quarter ended 30 June 2020.

The notation of *n* denotes the number of foundations and endowments included in each analysis. Returns are denominated in pounds sterling.

Asset allocation is generated using the investment manager structure for each client. Every investment product, fund, and vehicle that a client is invested in is assigned an asset class. Asset classes for a given investment product, fund, or vehicle are maintained across all clients to ensure comparability. The statistics throughout this analysis are calculated on an equal-weighted basis.

ASSET CLASSES. In Figures 1–3, global equity includes global ex UK equities (developed and emerging); hedge funds include long/short hedge funds and absolute return (ex distressed securities); private equity and venture capital include non-venture private equity, venture capital, and other private investments; real assets and inflation-linked bonds include public and private real estate, commodities, global inflation-linked bonds, private oil & gas/natural resources, timber, and public energy/natural resources; and bonds include UK bonds, global ex UK bonds, and high-yield bonds. In Figure 3, global bonds includes global ex UK bonds (developed and emerging). One institution reported an allocation to 'other', which represents an allocation to investment managers with a balanced funds strategy.

private investment performance reporting methodologies. All 20 of the foundations and endowments in this analysis with an allocation to private investments (approximately 1% of the total investment pool or greater) report private investment performance using a flat basis methodology. Total investment pool returns for second quarter 2020 include marketable asset performance for 1 April 2020 to 30 June 2020. The private investment portion of the investment pool is represented by a flat return (0%) for 1 April 2020 to 30 June 2020.

Published October 2020

**CALCULATION OF THE SHARPE RATIO.** The Sharpe ratio is defined as the excess return, or the return over the risk-free rate, on a portfolio divided by the total volatility as measured by the standard deviation of the portfolio. The most common approach to measuring risk is by the Sharpe ratio, which shows how much return above the risk-free rate (UK three-month Libor) the investor has earned per unit of risk (defined as standard deviation of returns). The higher the Sharpe ratio, the more the investor has been compensated for each unit of risk taken. The ratio is a measure of reward relative to total volatility. The formula is:

$$\frac{R_p - R_f}{S_p} = \text{Sharpe Ratio}$$

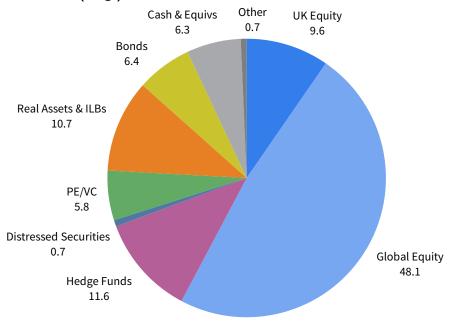

#### Where:

- $R_{_{p}}$  is the arithmetic average of composite quarterly returns,
- R<sub>s</sub> is the arithmetic average of T-bill (risk-free) quarterly returns, and
