Recommended Since September 30, 2023

INVESTMENT THESIS: We expect developed markets (DM) ex US small-cap equities will outperform their mid- to large-cap counterparts, given their low relative valuations, strong earnings growth outlook, and still-weak performance momentum (despite the rally in 4Q 2023). DM ex US small caps perform best during economic upswings—with limited downside during recessions—making the current valuation discount particularly attractive.

KEY SUPPORT #1: DM ex US small-cap equities trade at enticing valuation levels relative to their mid- and large-cap peers. In fact, small caps trade at an 11% discount, according to our preferred normalized earnings multiple, compared to their typical 17% premium. Historically, small caps consistently outperformed mid/large caps over subsequent three-year periods when starting valuations traded at a discount. Small caps appear adequately priced for an economic downturn scenario, and a recovery in economic activity—such as the recent rebound in Europe—would support their performance vis-à-vis mid/large caps.

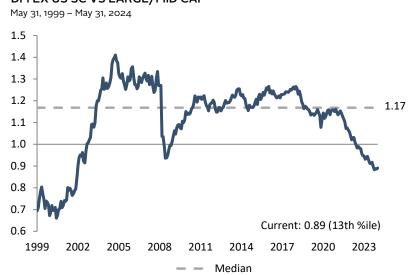

strong in 4Q 2023, upside potential for the trade remains. Analysts expect EPS growth of 15% in the next 12 months, compared to 7% for the mid- and large-cap universe. The expected earnings outperformance is broadly based across geographies and sectors. Small-cap price levels are now 17% below their three-year peak, whereas large caps have rebounded more quickly (1% below peak). Taken together, we expect the performance gap to narrow.

KEY SUPPORT #2: The valuation backdrop and earnings growth outlook suggest

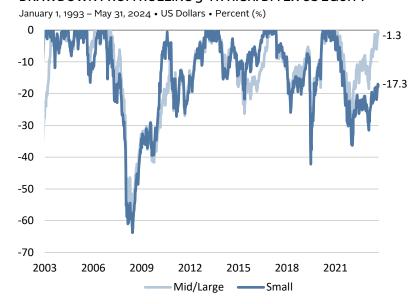

that DM ex US small caps are primed for a rebound. Although performance was

KEY RISKS: Relative to large caps, small caps have higher leverage, lower profitability, and are prone to larger drawdowns in a risk-off scenario. Real estate is the largest sector overweight and is concentrated in Japan. Easy monetary policy has protected performance, but any shift to tightening—such as the Bank of Japan's (BOJ) rate hike in March—could pose a headwind. Still, further monetary tightening by the BOJ is likely to be moderate and gradual.
